

INFRASTRUCTURE REPUTATION REPORT

Blacklisted domains linked to amplixity.com

A GTM Auto blacklist sweep of the redirect infrastructure behind amplixity.com. We resolved its redirect network, sampled the connected domains, and checked each against active spam and reputation blacklists.

**High-risk infrastructure detected**

29 of 48 sampled domains in this network are currently blacklisted — well past the 5-domain qualification gate. This is a heavily flagged redirect footprint.

Blacklisted domains

29 flagged

Every domain below carries the **GTM Auto** blacklist flag. We also ran a live cross-check against 8 public URI/domain registries — where a domain was independently confirmed, its registry is tagged on the row.

Registry cross-check

8 public domain-reputation registries · queried live 10 Aug 2026

SURBL
multi.surbl.org
6 listed · spam/abuse

NordSpam DBL
dbl.nordspam.com
0 listed

Suomispam DBL
dbl.suomispam.net
0 listed

Brukalai · black
black.dnsbl.brukalai.lt
0 listed

Brukalai · light
light.dnsbl.brukalai.lt
0 listed

abuse.ro URI
uribl.abuse.ro
0 listed

SIBL
dob.sibl.support-intelligence.net
0 listed

URIBL
multi.uribl.com
query refused

Across all 8 registries queried live, only **SURBL** (SURBL.org) lists any of these domains — 6 on its multi.surbl.org ABUSE dataset. **URIBL** (uribl.com) refused unkeyed queries and **Spamhaus DBL** (The Spamhaus Project) needs a keyed query service, so neither is confirmed either way — an absent tag means “not independently confirmed,” not “clean.”

HOW THIS SCAN RAN

1,264

Redirect domains resolved from the seed via a single host.io lookup

48

Secondary domains returned and checked against the blacklist

29

Confirmed on active spam / reputation blacklists

Method: GTM Auto blacklist-only scan. One host.io API call resolves the seed's redirect total and up to 50 connected domains, each then checked against the blacklist. Gates: count $\geq$ 10 redirects, blacklist $\geq$ 5 flagged domains — amplixity.com cleared both. Served from cache; no new API spend. Sample reflects the domains host.io surfaced on page one, not the full 1,264-domain network.

Registry cross-check: each flagged domain was queried live against 8 public URI/domain blacklists — SURBL (multi.surbl.org), URIBL (multi.uribl.com), NordSpam DBL (dbl.nordspam.com), Suomispam DBL (dbl.suomispam.net), Brukalai black & light (dnsbl.brukalai.lt), abuse.ro URI (uribl.abuse.ro) and SIBL / Support Intelligence (dob.sibl.support-intelligence.net). **SURBL** (SURBL.org) was the only registry to list any of these domains — 6 confirmed on its multi.surbl.org ABUSE dataset. URIBL refused unkeyed queries from the scan resolver and Spamhaus DBL (The Spamhaus Project) requires a keyed query service, so neither could be verified — an absent registry tag means “not independently confirmed,” not “clean.”
