

## INFRASTRUCTURE REPUTATION REPORT

# Blacklisted domains linked to oaza.io

A GTM Auto blacklist sweep of the redirect infrastructure behind oaza.io. We resolved its redirect network, checked every connected domain, and cross-checked each against active spam and reputation blacklists.

**High-risk infrastructure detected**

**13 of 18** domains in this network are currently blacklisted — well past the 5-domain qualification gate. This is a heavily flagged redirect footprint.

Blacklist rate within sample

**72.2%**13 blacklisted 5 clean

## Blacklisted domains

**13 flagged**

Every domain below carries the **GTM Auto** blacklist flag. We also ran a live cross-check against the public URI/domain registries — where a domain was independently confirmed, its registry is tagged on the row.

**SURBL****CHECKED**

**0 of 13 confirmed** — none currently listed on SURBL.

**URIBL****NOT VERIFIABLE**

Registry refused queries from this scan resolver — listings could not be confirmed either way.

**Spamhaus DBL****NOT VERIFIABLE**

Registry refused queries from this scan resolver — listings could not be confirmed either way.

| #  | DOMAIN                              | LISTED ON  |
|----|-------------------------------------|------------|
| 01 | <a href="#">oazacopywriting.io</a>  | ● GTM Auto |
| 02 | <a href="#">oazacopywriting.org</a> | ● GTM Auto |
| 03 | <a href="#">oazaconsulting.me</a>   | ● GTM Auto |
| 04 | <a href="#">borismustapic.org</a>   | ● GTM Auto |

| 13 | <a href="#">oazaconsulting.net</a>  | ● GTM Auto |

## HOW THIS SCAN RAN

**18**

Redirect domains resolved from the seed via a single host.io lookup

**18**

Connected domains returned and checked — the entire network

**13**

Confirmed on active spam / reputation blacklists

Method: GTM Auto blacklist-only scan. One host.io API call resolves the seed's redirect total and up to 50 connected domains, each then checked against the blacklist. Gates: count  $\geq$  10 redirects, blacklist  $\geq$  5 flagged domains — amplixity.com cleared both. Served from cache; no new API spend. host.io returned all 18 redirect domains, so this is full network coverage — not a page-one sample.

Registry cross-check: each flagged domain was queried live against the public URI/domain blacklists.

**SURBL** was queried for every domain and returned no active listings — none are currently on SURBL.

**URIBL** and **Spamhaus DBL** refused queries from the scan resolver, so their listings could not be verified — an absent registry tag means "not independently confirmed," not "clean."
