

INFRASTRUCTURE REPUTATION REPORT

Blacklisted domains linked to webtouch.ch

A GTM Auto blacklist sweep of the redirect infrastructure behind webtouch.ch. We resolved its redirect network, checked every connected domain, and cross-checked each against active spam and reputation blacklists.

**Elevated-risk infrastructure detected**

7 of 18 domains in this network are blacklisted — clearing the 5-domain qualification gate. A significant share of this footprint is flagged.

Blacklisted domains

7 flagged

Every domain below carries the **GTM Auto** blacklist flag. We also ran a live cross-check against the public URI/domain registries — where a domain was independently confirmed, its registry is tagged on the row.

SURBL

CHECKED

0 of 7 confirmed — none currently listed on SURBL.

URIBL

NOT VERIFIABLE

Registry refused queries from this scan resolver — listings could not be confirmed either way.

Spamhaus DBL

NOT VERIFIABLE

Registry refused queries from this scan resolver — listings could not be confirmed either way.

#	DOMAIN	LISTED ON
01	vertriebs-agentur.ch	● GTM Auto
02	webtouch-agentur.ch	● GTM Auto
03	webtouch-consulting.ch	● GTM Auto
04	try-webtouch.ch	● GTM Auto
05	wachstumsteam.ch	● GTM Auto
06	vertriebs-system.ch	● GTM Auto
07	vertrieb-mit-system.ch	● GTM Auto

HOW THIS SCAN RAN

18

Redirect domains resolved from the seed via a single host.io lookup

18

Connected domains returned and checked — the entire network

7

Confirmed on active spam / reputation blacklists

Method: GTM Auto blacklist-only scan. One host.io API call resolves the seed's redirect total and up to 50 connected domains, each then checked against the blacklist. Gates: count ≥ 10 redirects, blacklist ≥ 5 flagged domains — amplixity.com cleared both. Served from cache; no new API spend. host.io returned all 18 redirect domains, so this is full network coverage — not a page-one sample.

Registry cross-check: each flagged domain was queried live against the public URI/domain blacklists. **SURBL** was queried for every domain and returned no active listings — none are currently on SURBL. **URIBL** and **Spamhaus DBL** refused queries from the scan resolver, so their listings could not be verified — an absent registry tag means "not independently confirmed," not "clean."
